What is a potential in-school transmission: A potential in-school transmission is when an individual is identified as a close contact in school and subsequently tests positive. It is labeled as potential transmission because sometimes, in addition to the exposure at school, these individuals may also have had additional recent exposures outside of school.

What happens when there is a potential in-school transmission? The Medical Advisory Team meets to review the data associated with the case, evaluates the mitigation strategies that are being employed and advises on next steps. Some of the things we evaluate are: the activities happening, air quality, distancing and masking in the areas where transmission may have happened.

STATE WEEKLY PUBLIC HEALTH INTERACTIVE DASHBOARD

Data can be found at this [link](#). Choose Interactive Dashboard, City and Town Data and the Weekly Status Map.

City/Town	Total Case Count	Case Count (Last 14 Days)	Average Daily Incidence Rate per 100,000 (Last 14 days)	Relative Change in Case Counts	Total Tests (Last 14 days)	Percent Positivity (Last 14 days)	Change in Percent Positivity
Northborough	1363	25	13.2	Lower	1796	1.56%	Lower
Southborough	602	31	22.9	Higher	2081	1.68%	Higher

Please note: Data for this table is based on information available in the DPH surveillance database at a single point in time. Case counts for specific cities and towns change throughout the day as data cleaning occurs (removal of duplicate reports within the system) and new demographic information (assigning cases to their city or town of residence) is obtained.
